

Medi Wish wipes, tough on germs!

**Germ contamination was yesterday -
today there are Medi Wish wipes.**

Medi Wish wipes were developed for use in all areas where hygiene is a priority, such as hospitals, retirement homes, nursing homes, kindergartens, schools, doctor's surgeries, food processing facilities, hotels, restaurants, etc. The highly effective bioactive fibres (silver fibres) guarantee a long-lasting anti-bacterial effect, even after 50 wash cycles at 95°C (tested by the Hohenstein Institute). The silver fibres continuously release silver ions that serve as a natural means for stopping germs and bacteria from growing and spreading. This means using the wipes doesn't spread germs and bacteria across cleaning surfaces. Thanks to their anti-bacterial effect, the wipes can also be washed at low temperatures, which saves energy. Stops unpleasant odours - even after repeated use!
